SUMMARY

Full-Stack Developer specializing in end-to-end web systems with TypeScript, Next.js, and PostgreSQL. I turn complex operations into reliable, traceable, and user-friendly workflows, from data modeling and APIs to automation and deployment. I prioritize user experience, performance, data integrity, and validated releases. Authorized to work in Spain and the EU.

EDUCATION AND LANGUAGES

Computer Engineering - University of Camagüey (2021 - 2025) | **Spanish:** native | **English:** B2 (CEFR, self-assessed)

SKILLS

FRONTEND	TypeScript, Next.js, React, Tailwind CSS, GSAP
DATA AND BACKEND	PostgreSQL, Neon, Supabase, Prisma, Zod
INTEGRATIONS AND CLOUD	n8n, Stripe, Resend, DigitalOcean Spaces, Vercel
AI AND QUALITY	OpenAI Codex, Git, GitHub, Vitest, automated testing

EXPERIENCE

Full-Stack Developer May 2025 - Present
Independent Professional / Private clients
Valencia, Spain (remote)

- Build end-to-end systems with TypeScript, Next.js, and PostgreSQL, integrating APIs, automation with the **n8n** platform, payments, transactional email, and deployments on Vercel.
- Protected the integrity of more than 2,800 verified financial transactions by implementing idempotent processing, atomic operations, compensating reversals, and audit logs.
- Designed granular authorization for administrators, regional managers, branch managers, and sales staff, along with multi-branch workflows and complex rules for currencies, commissions, balances, and reconciliation.
- Worked directly with clients to replace Excel-based workflows across six branches, reducing daily reconciliation from approximately one hour to a near-automated process.

SELECTED PROJECTS

Financial Operations Platform May 2026 - Aug 2026 | In production
Centralizes transactions, balances, debts, currencies, expenses, and reconciliation. Designed idempotent ingestion against repeated reads from the **n8n** platform, auditable reversals to correct human errors, and FIFO valuation to determine the exact cost of the available balance.
- Processed more than 2,800 verified transactions in production.

Business Management System (S.G.I.A.) Oct 2025 - Jan 2026 | Production
ERP that replaced Excel and centralized operations across six branches, with granular permissions and rules for inventory, sales, suppliers, foreign currencies, and commissions.
- Reduced daily reconciliation from approximately one hour to a near-automated process.

Tattoo Raffle - payments and reservations Aug 2025 - Sep 2025 | Completed campaign
Live application with Stripe Checkout, transactional email, and an administrative dashboard. Implemented atomic reservations against race conditions and retry-safe processing through signed webhooks, idempotency, and event logging.
- Processed a 200-entry raffle campaign without duplicate reservations.
